ABR CAM is a powerful device that will help enhance your security measures by providing surveillance, monitoring and recording capabilities.

Features

All time colour | 2-Way Audio Intercom | Pre-recorded messages | Night Vision Capture | Weather Resistance | 64/128GB SD Card support | Mobile App with Cloud Recording, storage, Admin & User access | Live Streaming 24/7 | 2 way Audio Recording & Video Motion Capture | MADE IN INDIA product.

Areas of Application

- ✓ Agri-horticulture – Agriculture/Aquaculture/Horticulture/Floriculture
- ✓ Public Transportation Hubs – Bus Stations/Metro Stations/Railway Stations/Airports
- ✓ Residential Housing - Private homes/Apartments/Gated Communities
- ✓ Places of Worship – Temples/Mosques/Gurudwaras/Churches etc.
- ✓ Workplaces – Private & Corporate Offices/Commercial Centers/Manufacturing Units
- ✓ Public Places - Crowded public places/Road Intersections/Streets/Parks
- ✓ Healthcare Facilities – Hospitals/Clinics/Labs
- ✓ Educational Institutions – Schools/Colleges/Universities
- ✓ Research Centers – Especially for Crop research and Seed breeding.
- ✓ Warehouses – Especially Food warehouses

▶ ABR CAM Uses & Benefits

In Agricultural Landscapes:

- ✓ **Crop Monitoring:** Farmers can monitor crop growth, disease outbreaks, and pest infestations. Crop conditions can be remotely observed and potential issues detected early on. This enables farmers to take timely action, such as adjusting irrigation, applying pesticides or fertilizers, or implementing crop protection measures.
- ✓ **Equipment and Machinery Monitoring:** Expensive machinery and equipment is used in farming crop lands. ABR CAM can help monitor and secure these assets by recording any unauthorized use, detecting maintenance issues, or identifying potential malfunctions. This allows for prompt maintenance or repairs, reducing downtime and maximizing productivity.
- ✓ **Deters theft and vandalism in agricultural areas:** Farms and rural properties often have valuable equipment, livestock, and crops, making them potential targets for theft. Installing ABR CAM will deter and also help identify culprits in case of any illegal activity.
- ✓ **Livestock Monitoring:** ABR CAM can be used to monitor livestock and ensure their well-being. It can provide visual surveillance of animals in barns, sheds, or grazing areas, allowing farmers to keep an eye on their livestock's health, behavior, and safety. This can be particularly useful for monitoring pregnant animals or those requiring special care.
- ✓ **Worker Safety and Monitoring:** Helps enhance worker safety by providing a visual record of activities and ensuring compliance with safety protocols. Also aids in monitoring the use of protective gear and identifying potential hazards, thereby minimizing accidents and promoting a safer working environment.
- ✓ **Research and Data Collection:** In certain agricultural research projects, ABR CAM can be used to collect data for analysis and study. For instance, monitoring birds and wildlife activity, tracking the movement of pollinators, or studying plant growth patterns can be facilitated by ABR CAM, providing valuable insights for scientific research and ecological studies.

▶ All Other Areas of Application

The strategic installation of ABR CAM in all areas requiring surveillance,

- ✓ Will act as a strong deterrent for unlawful and criminal activities;
- ✓ Helps in timely identification of potential threats and risks and ensures enhanced emergency preparedness;
- ✓ Discourages internal theft, misconduct or unethical behavior by employees/workers;
- ✓ Monitors access to sensitive areas, helps protect valuable assets, equipment and inventory from unauthorized access or theft, thereby helps reduce financial losses to Users.
